RE: MB Docket No. 15-149

Mr. Tom Wheeler  
Chairman  
Federal Communications Commission  
445 12th Street, SW  
Washington, DC 20554

Dear Chairman Wheeler,

At the Northern Kentucky Chamber of Commerce, our vision is to establish a world-class region in which to start, develop and grow thriving businesses. We have members spanning all industries and sizes, but 78% are considered small businesses, and 22% have fewer than 5 employees. This means many of our members are small entities that likely require tailored services to aid their businesses. They need to work with broadband companies that can cater to all sizes and offer a range of products.

We believe New Charter, a broadband company waiting for approval, would be a great option for our members. By combining the best of Charter Communications, Time Warner Cable and Bright House Networks, New Charter's products already would be market-tested. This means customers would be working with a new company that offers products with proven success.

New Charter's big selling point for small businesses would be its array of bandwidth speeds. Some small companies require basic broadband while others need extensive options; however, these enterprises all need affordable prices. New Charter would accommodate each of these businesses through standard broadband speeds ranging from 60 Mbps to 300 Mbps, and extending to 10 Gbps for enterprise businesses. These options would be available for all our members.

New Charter would be a great addition to the cable broadband industry. We believe businesses in our community would benefit greatly, so we ask you to approve the merger.

Sincerely,

A handwritten signature in blue ink, appearing to read "Trey" followed by a stylized "G" or "8".

Trey Grayson  
President and CEO, Northern Kentucky Chamber of Commerce
